**Title of Invention: MicroTracker Mouse Pad**

**Claims**

I. What I claim as my invention is the use of microfiber cloth, as defined in the specifications, as the surface material of a computer mouse pad.

The microfiber cloth is adhered to a rubber-like substance to create the mouse pad.

The microfiber material may be adhered to any number of different types of materials to create the mouse pad.

Regardless of how the mouse pad is created, if the mouse pad utilizes microfiber cloth as the surface material, it is protected by this claim.

Our trade name that we currently use for this invention is called "The MicroTracker Mouse Pad", however we claim the right to use other trade names in the future for a mouse pad that utilizes microfiber cloth as the surface material.

II. What I claim as my invention is a mouse pad that is also a computer screen cleaning cloth, in one and the same product.

Whereas microfiber is the surface material used in the creation of the mouse pad invention called "The MicroTracker Mouse Pad", as stated in Claim I above, and whereas microfiber cloth is designed to clean fine grease, dust and dirt particles without harming delicate surfaces, the microfiber mouse pad can also be utilized to efficiently clean desktop, laptop or other computer screens.
